

ISO 27001 Certificate for Knipp Medien und Kommunikation GmbH

With the enormous increase of data available in all fields of daily life, for many people the question about the security of the processed data becomes more and more pressing. In order to permanently guarantee IT security, the international standard ISO 27001 has been developed. The Dortmund based Internet system house Knipp Medien und Kommunikation GmbH has now been awarded the DIN ISO/IEC 27001:2015 certificate for its comprehensive security concepts.

The ISO 27001 norm specifies requirements and procedures to maintain the availability, integrity and confidentiality of information in a sustained manner. These include, for example, technical and physical means such as data encryption and redundancy of critical system components. Moreover, the security awareness of employees is of central importance. A permanent risk analysis of business-critical processes additionally ensures that threats are identified early and appropriate measures are taken.

For Knipp, the security of the handled information has always been an integral part of its corporate culture. The ISO 27001 certificate now proves that the security measures established at Knipp fulfill the sophisticated international standards. The certification of Knipp was carried out following the so-called full-scope approach and comprises all services, infrastructures and processes. This confirms the longstanding trust that Knipp customers like alltours, Daimler, Evonik, SAP or Deutsche Telekom have grown in the services around the data center,

the custom software development and the print production.

In addition to the immediate customers of Knipp, many Internet users benefit from the outstanding level of safety: With its products »TANGO Registry Services« and the nameserver service »ironDNS«, Knipp is the technical operator of a variety of top level domains and of important infrastructure components for the Internet.

»We have always considered information security and privacy as highly valuable assets and have invested accordingly in the necessary technical and organizational requirements. With the ISO 27001 certification, we now have the official confirmation that this commitment pays off. This is a pleasant appreciation to us, and for the users of our services it is the assurance that their data are securely protected at Knipp.« (Elmar Knipp, Managing Director)
